

AI Engineer with 4.5+ years of ML experience: building LLM systems at Russia's top banks, researching at Tsinghua University, and teaching LLM Agents at HSE University. Specializing in AI Agents, harness engineering, end-to-end ML pipelines, and AI in finance

EXPERIENCE

Sberbank - AI Engineer (Multi-Agent Systems & NLP)

Oct 2025 — Present

- Engineered a multi-agent system (SGR, structured output, supervisor-executor) that assists project leaders in decomposing projects into actionable tasks while proactively identifying risks and recommending mitigation guidelines
- Developed an asynchronous multi-agent system that delivers *unbiased product analysis days faster than human experts*
- Designed an LLM-based pipeline (LangChain, function calling) that provides teams with best practice recommendations to enhance operational efficiency, *reducing average lead time by 10%*

HSE University (Faculty of CS) - Lecturer (LLM Agents & Harness Engineering)

Sep 2026 — Present

- Designed from scratch and teach Multi-Agent Systems courses in [English](#) and [Russian](#) for 130+ students; materials on [GitHub](#)

Tsinghua University - AI-Researcher (Multimodal AI & Multi-Agent Systems)

Aug 2024 — Oct 2025

- Enhanced the robustness and efficiency of multimodal information processing systems (*~2.7% increase in accuracy*) by integrating advanced DL-based pipelines (weighted fusion networks, modality reconstruction, Swin, Wav2vec, BERT)
- Built and deployed an MVP of a multi-agent system (AutoGen, FastAPI, Docker) for the repository documentation generation

VTB Bank - ML Engineer (NLP & Time Series Analysis)

Sep 2023 — Aug 2024

- Developed a pipeline for clustering (BERT, TF-IDF, SVD, K-Means) and hierarchical classification (LightGBM) of text requests received by technical support. The approach *reduces the average processing time of a request by ~25%*
- Built a time-series anomaly detection method (isolation forest, Prophet, volatility analysis). Deployed the pipeline (Airflow, Docker, PostgreSQL), enabling proactive identification of information system issues *hours ahead of human monitoring*
- Created a time series classifier (50+ feature generation, LightGBM) and integrated it with forecasting and anomaly detection tasks

Sberbank - Data Scientist (Classic ML & Recommender Systems)

Mar 2022 — Sep 2023

- Fully responsible for 15+ ad hoc projects* for multi-format retail businesses, forecasting existing store performance and ranking profitable expansion locations (PySpark, CatBoost, linear regression, spatial machine learning and feature engineering)
- Implemented a demand forecasting system (CatBoost, Prophet, Hyperopt) for sausage factory products. The pipeline estimates the volume of production and supply of goods, *enhancing the supply volume efficiency by ~20%*

SKILLS

- AI Expertise:** Multi-Agent Systems, LLM Applications, NLP, Agentic RAG, Fine-Tuning (Vanilla, LoRA), Multimodal AI, End-to-End ML Systems, MLOps, Time Series Analysis (Forecasting, Anomaly Detection), Classic ML, AI in Finance, Ranking, Econometrics
- Agentic Engineering:** Spec-Driven Development, TDD, CLI, Harness (Claude, Context Engineering, MCP, Skills, Subagents, Hooks)
- Tools & Frameworks:** Python, PyTorch, Hugging Face Transformers, LangChain, LangGraph, AutoGen, scikit-learn, CatBoost, LightGBM, FastAPI, Docker, Kubernetes, Airflow, PostgreSQL, PySpark, Git, SQL, Bash, asyncio, multithreading
- Communication:** English (fluent), Russian (native), Chinese (beginner)

RESEARCH & PROJECTS

Research

- Author of the [WWW paper](#) on a [fine-tuned open-source LLM](#) for reliability scoring of web content
- [Built](#) an open-source Multi-Agent System that improves accessibility via context-aware modality conversions ([paper](#))
- Author of the [Springer book chapter](#) on AI in network devices for efficiency, latency, and topology optimization
- [Speaker](#) at the ODS AI conference. Topic: Anomaly Scoring for Preventive Detection of Failures in Information Systems

Pet Projects

- Vibe-coded a [horror game](#) from scratch via Claude Code using Spec-Driven Development and TDD; [article](#) reached 14K+ views
- [Led a team of 4](#) to build a full-stack multi-agent system (LangGraph, fine-tuned BERT, FastAPI, Docker) for mental health support
- Took part in a Kaggle Clicks prediction competition (Vowpal Wabbit, PySpark). Ranked top 10%

EDUCATION

Tsinghua University - Master's in Computer Science

Sep 2024 - Jun 2026

- Relevant courses: NLP, Information Retrieval and Recommender Systems, Time Series Intelligence, Machine Learning, Reading and Writing Technical Papers, Combinatorics and Algorithms, Computer Networks, Chinese

HSE University - Bachelor of Economics (Machine Learning & AI in Finance)

Sep 2020 - Jun 2024

- Researcher at the Laboratory of Stochastic Analysis and its Applications. Topics: option price modeling using AI, neural networks
- Relevant courses: Deep Learning, NLP, Large-Scale Machine Learning, Machine Learning 1, Machine Learning 2, Data Analysis in Python, Probability Theory and Statistics, Stochastic Models, Econometrics, Financial Economics, Financial Markets
